

# Sustainability

Sustainable sourcing practices enable us to consistently deliver fresh prepared sushi while protecting and improving the natural environment and livelihoods of local communities. Our commitment to sustainably sourced seafood products helps fishing communities improve how they manage their resources, increasing both yield and quality of fish stock over time.

We will never knowingly buy illegal seafood. We work with reputable suppliers who only purchase product for us with the appropriate legal paperwork.

We make purchase and sales decisions based on social, ecological, and economic considerations.

Suppliers are selected and monitored based on demonstration of continuous improvement in the sustainability of their operations.

We do not do business with suppliers who cannot fulfill their ethical and or sustainability responsibilities.
